

Editorial

Dear Readers and Colleagues,

Welcome to the second issue of Neurologia Croatica in 2024, which marks the end of the second year of the journal's online publishing.

In this issue we will share an interesting case presentation of the vertebral body infarction as a sign of spinal cord ischemic stroke with our readers. Difficulties related to the entanglement of different conditions and choosing the best course of treatment for each condition without impacting the other are presented in the case report about juvenile absence epilepsy and myasthenia gravis. Through a compelling case report, we will inform our readers about possible renal damage caused by zonisamide treatment. A scoping review will provide better insight into the comorbidities related to epilepsy.

We are grateful to all reviewers who completed their reviews in 2024 because their scientific contribution is highly significant to the success and continuity of Neurologia Croatica.

In the end, I would like to thank all our readers for their support and hope you will enjoy reading this issue.

Mario Habek
Editor-in-chief
